

Meteoroid Analysis

Objective:

Gather the rare **metallic elements** that are inside **meteoroids**, small objects floating in space, gathered on your space travels.

Intro:

Oh no! The hull of your ship needs to be repaired! The Bussard collectors are great for gathering gaseous materials, but they don't gather the **metals** needed to repair your ship! But, there is good news. You have recently passed through an **asteroid field** and collected some space rocks containing **aluminum (Al)** that you can use to repair your hull.

How To?

Step 1: Break open each **meteoroid** with the hammer.

Step 2: Pick out the chunks of **aluminum (Al)**. Not every meteoroid will have some.

Step 3: Put the **Al** in the labeled container and whatever is leftover in the waste container.
